

Mr. Laszlo Bayer
Chief Operating Officer
Therapeutic Industries, Inc.

Dear Laszlo,

We established the International Center for Long Term Care Innovation ("InnovateLTC") with the aligned vision of our partners to "Enhance the Quality of Care and Quality of Life for the Global Aging Population Through Accelerating Innovation." Our location in Louisville, Kentucky is part of a regional strategy dubbed the Lifelong Wellness and Aging Care Initiative. This region has the largest economic cluster of company headquarters in the Aging Care Industry including several public companies. These included Humana, Pharmerica, Kindred Healthcare, Rescare, Almost Family, Trilogy, and Signature Healthcare as examples. Our intent is to seek out innovative products, service models and technology solutions to partner with for Research, Validation and Diffusion into the market. Signature is a sponsoring partner of InnovateLTC that has 73 facilities throughout the Southeast United States. We believe that skilled nursing facilities offer a great environment to perform customer experience and worker acceptance testing for innovative products that enhance outcomes like the Barihab Transformer.

We appreciated the introduction from our mutual partner LINAK U.S. to your company. Upon learning about the capabilities of the Barihab Transformer we are excited that this solution, while innovative, offers some truly practical advantages for therapist in multiple settings. We received very positive feedback after hosting you and demonstrating the Barihab Transformer at our inaugural Innovator's Showcase Runway event this year. We are committed to partnering with the Therapeutic Industries team to further enhance development and market diffusion of your solutions. Presently we have two Barihab Transformers deployed at Signature facilities in Kentucky and Florida with exciting feedback from the pilots. The Barihab Transformer benefits users of many physical dimensions and capabilities allowing therapist to conduct both physical and occupational activities simultaneously. Personally I was impressed how safe and worry free the experience of being elevated using the Transformer actually was when I volunteered. Watching my son Zac at 22 with Cerebral Palsy smile when standing in the machine and not wanting to stop using it said everything. Your product can benefit both young and older patients in almost every setting where therapy is delivered.

Congratulations on your innovative solution and we are proud to continue to deepen a partnership with Therapeutic Industries.

Sincerely,

A handwritten signature in blue ink, appearing to read "J. P. Reinhart", is written over a large, light blue circular scribble.

John P. Reinhart
President & CEO
International Center for Long Term Care Innovation
